Dear Member,

After the abundance of recent rainfall in our area, Lake Palo Pinto Area Water Supply Corporation (LPPAWSC) will be removing drought restrictions **effective June 11th, 2024.**

LPPAWSC recognizes the need to implement drought-related water use restrictions for its customers based on the same triggering criteria recognized by the Palo Pinto County Municipal Water District No. 1 (the District). One set of triggering criteria defined by LPPAWSC in its Plan (lake levels for Lake Palo Pinto) will be the same as the triggering criteria defined in the District's Drought Contingency Plan.

STAGE	Lake Level (MSL)	% of Capacity
Stage 1	864' – 861'	74.5%-54%
Stage 2	861' – 858'	54%-38%
Stage 3	858' – 854'	38% - 23%
Stage 4	854' and below	23% and below

“On May 31, 2024, the water level in Lake Palo Pinto exceeded 864 ft MSL. Per Section 4.5.1 of the District's Water Conservation and Drought Contingency Plan dated May 1, 2024, this began the process of reviewing the requirements for termination of Stage 1 Mild Water Shortage Conditions of the plan. The District has determined that requirements for termination of Drought Response Stage 1 – Mild Water Shortage Conditions have been satisfied.”
